   In this course students explore the emerging practices and transformative potential of mobile media storytelling and games. Students examine the ways that written and visual narratives, maps, and interactive digital experiences structure knowledge in physical and virtual space. The first half of the course is spent reading, interacting with, and assessing existing location-based texts and games such as interactive webstories, electronic performance theater, and augmented reality games. In the second half of the course, students apply the conceptual and aesthetic principles learned in the first half of the course in order to build experimental GPS-based locative games and stories. Students design original mobile works in platforms such as Google Earth, ARIS, and Siftr.
