I. Graph Plotting and Graphical Analysis
   Prepared data will be plotted by hand. The same data is then plotted using computer software.

II. Graphical Analysis
    Additional graphical analysis will be done with the aid of computers.

III. Tools for Scientific Thinking - Investigations #1, 2, 3
     Sonar will be used to relate position and motion with computer generated graphs.

IV. Force Table
    Analytical and graphical solutions to vector addition of equilibrium forces will be checked out on a force table.
V. Tools for Scientific Thinking - Investigation #4
Sonar will be used to investigate velocity.

VI. Tools for Scientific Thinking - Investigations #5, 6
Sonar will be used to investigate acceleration.

VII. Acceleration of Gravity
The acceleration of free falling objects will be determined.

VIII. Forces and Motion
The acceleration of carts along a track and experiencing a constant force is measured.

IX. Plotting Data - The Spring
The behavior of loaded springs is studied.

X. Measurement and Significant Figures
Areas, volumes and time are measured with attention to accuracy and precision.

XI. Projectile Motion
Small plastic balls are fired from a spring gun. Calculated and measured ranges are compared.

XII Work and Energy
Students will determine the work done on a (nearly) frictionless cart and show that the work done is equal to the increase in kinetic energy of the cart. Furthermore, they will show that the increase in energy of the cart is equal to the decrease in potential energy of the falling weight that supplies the force on the.
